

Beyond Technologies

Security is not a cost, but a
strategic investment that
promotes **company growth**
and protection

Since **1993** Italsicurezza has been dealing with national and international **Physical Security** and **Fire Detection Systems**. We implement integrated security systems for business customers, public clients and private individuals.

Thanks to our solid experience in physical security and fire prevention, we are involved in all the systems realization stages, starting from the design up to the maintenance and assistance h24, making thousands of interventions every year.

More than 900
interventions a year

About 8.000
instaleld systems

About 40 staff
members

More than 3.000
satisfied customers

We gained several professional **certifications** ensuring quality and reliability of our processes and achievements.

Due to our consolidated skills, we can invest in **special projects** requiring innovative and advanced technologies.

Nowadays we are developing **ISSAR**, which is a system based on augmented reality and artificial intelligence. Its aim is to improve safety in companies and make the professionals' work more efficient.

Italsicurezza's mission, vision and values

Mission

We provide the most efficient solutions to address safety and security risks, relying on the best technologies available. We are involved in all the stages of the systems realization, designing customized solutions and providing an easy-to-use interface to manage the systems.

Vision

We dream of becoming a leading company in our field, improving our customers' safety and quality of life, thanks to our competence and ensuring full compliance with increasingly stringent regulations. We invest in staff training to make solutions increasingly smart.

Generativity

We are aware of the business' role in society and we believe in generativity. We work with the local community and support many no-profit initiatives. For example, we have been working with the "Fondazione Più di un Sogno" in the province of Verona since 2015.

Research

Innovation is an integral part of our DNA: we want to go beyond the most common and traditional solutions, continuously investing in research and development projects on advanced technologies, including PSIM software, artificial intelligence, augmented reality, cybersecurity and privacy.

Our history

Italsicurezza is founded
in 1993 in Verona,
by **Stefano** and
Giovanni Moretto

1993

In 1999 Italsicurezza is
one of the first
companies to gain
ISO 9001 certification

1999

In 2010 Italsicurezza moves
to a bigger and larger
headquarter in **Legnago**,
via Ezio Vanoni

2010

In 2019 a company branch
is opened in **Switzerland**
in the city of Lugano, via C.
Maderno 23

2019

In 2020 Italsicurezza
achieves **ISO/IEC**
27001:2013 certification
for information security

2020

In 2024 Italsicurezza
achieves **ISO/IEC**
27001:2022 certification
for information security

2024

In 2025 Italsicurezza
opens its new
branch in Verona,
located in Via Pacinotti

2025

BEYOND SECURITY

We offer custom solutions for every customer needs.

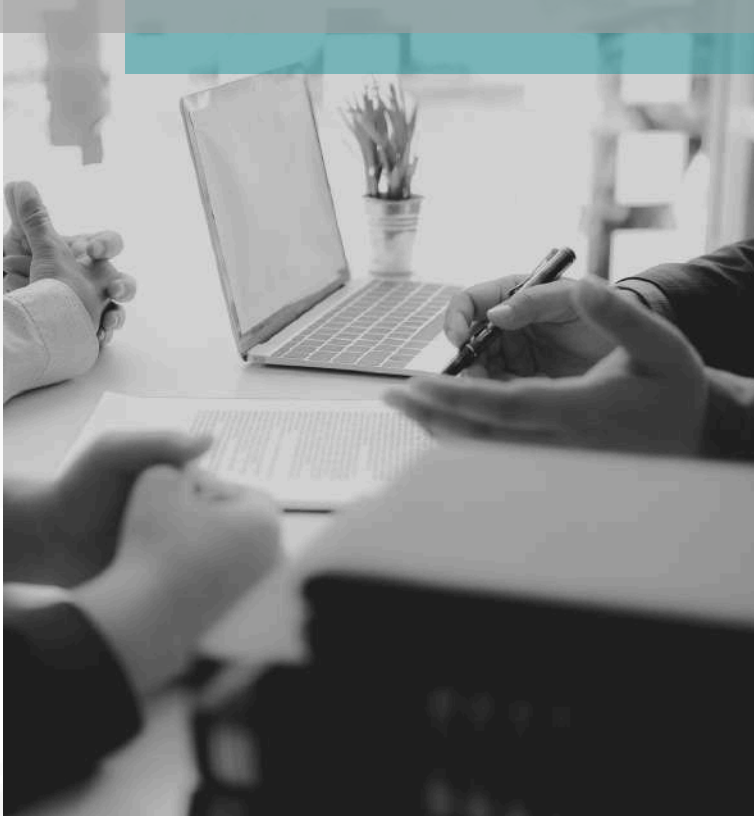

We design and plan the most suitable systems to guarantee the optimal level of safety.

Each intervention is preceded by careful listening to the Client's requests and supported by an in-depth analysis of risks and needs, in order to identify the best solutions and strategies.

EXPERTISE

Quality drives our every action. We want to offer high level solutions resulting from the identification of the customers needs. Customer requests are turned into reality thanks to the best technologies and our professional team members knowledge and skills. We try to keep improving our company performances thanks to our constant training and professional certifications.

VISION

We are committed to offering high quality standards with a fair price-quality balance, always providing the best solution for each need.

Different solutions require different technologies and approaches: thanks to our knowledge and skills, we are able to find the most suitable solution for the Customer.

FULL SUPPORT

We aren't simply installers, but also professional System Integrators dealing with safety and security comprehensively. After the installation, we still take care of the customers through our customer service, maintenance and consulting services.

Italsicurezza relies on its qualified engineers during the development process.

CERTIFIED PRODUCTS

We employ high quality technologies made by the best brands and guaranteed by certified standards, such as the "EN 54 Fire detection and fire alarm systems" standard and the EN 50131 "Alarm systems - Intrusion and hold-up systems" standard.

We choose our suppliers by carefully assessing their qualifications and their professional ethics.

STANDARD COMPLIANCE

Each of our interventions is carried out in full compliance with all the technical regulations. We pay special attention to the General Data Protection Regulation (GDPR n. 2016/679), to the Statute of Workers' dispositions (art.4 L. 300/70) and NIS 2. We believe in the importance of knowledge and we focus on the continuous training to guarantee Customers investments.

Full service

1 ANALYSIS AND CONSULTING

Consulting is based on listening to the customer's needs and risk analysis, both of which are essential for a truly effective system.

2 DESIGN

The study carried out allows us to identify the best solutions, designing customized security systems for each application.

4 INTEGRATION

To achieve efficiency, security systems must be integrated with each other and easily controlled with a single user interface.

5 MAINTENANCE

The proper functioning of any system or device requires appropriate maintenance activity by qualified professionals.

3 INSTALLATION

We create the best solutions by installing the most suitable technologies to effectively satisfy the Customer's needs.

6 24H ASSISTANCE

For any unforeseen events, an assistance service is always available: Italsicurezza offers the Customer a competent and effective 24-hour assistance service.

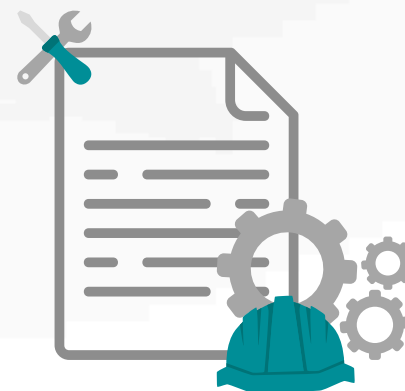

Maintenance of security systems

Security systems' maintenance is essential to continue to ensure effective protection over time.

Italsicurezza offers ordinary, extraordinary and preventive **maintenance** services in full compliance with the reference regulations for video surveillance, intrusion detection and fire prevention systems: each system or device, in fact, requires specific activities regulated by individual standards and often certified skills.

Our technical team has the necessary **skills** to perform maintenance in compliance with the law. In fact, it is a fundamental operation that must be carried out by adequately **qualified professionals** belonging to a **specialized company**.

Particular attention must be paid to certain types of systems or devices that require specific knowledge.

Maintenance of **fire detection systems** is regulated by the **UNI 11224:2026** regulation which introduced the seniority criterion for detectors, with the aim of ensuring greater controls over time. Fire protection devices are regulated by multiple laws that require competence certifications.

Maintenance of **video surveillance systems** is provided for by CEI EN 62676-4 and that of **intrusion detection systems** by CEI 79-3:2024.

Cybersecurity and physical security

The interconnection between cybersecurity and physical security is now evident and unstoppable, also a result of the central position occupied by information and network systems in all of our lives, to the point that a cyber attack on strategic structures could have serious repercussions in terms of money and the operation of services, players or entire supply chains.

Some security systems, in particular **video surveillance, intrusion detection, access control**, but also software for managing systems and fire control panels, can be vulnerable due to exposure to the network and the processing of particular or even sensitive data.

With the aim of raising the level of security in the European Union, **Directive 2022/2555 NIS 2** was introduced, revolutionizing the way companies manage cybersecurity and, by extension, physical security.

The directive concerns the so-called **essential and important entities**, i.e. public and private companies that are significant due to their size (at least medium-sized companies) and the sector in which they operate (such as transport, health, food, etc., listed in annexes I and II of the legislation).

The new features implemented mainly concern:

Technical, hardware, software and procedural measures to improve **cybersecurity** and **resilience** at the IT level.

Supply chain security, whereby essential and important entities will have to verify that their suppliers comply with certain security standards, excluding all those who are not compliant.

The multi-risk approach aims to provide a 360 degree protection of information, technologies, systems and sites against failures, human errors, malicious actions or natural phenomena.

Our solutions

VIDEO SURVEILLANCE SYSTEMS

We offer video surveillance systems for the prevention and reconstruction of criminal acts and viability monitoring, using the most advanced video analysis technologies. Our installations comply with technical regulations (in particular CEI EN 62676-4) and privacy (GDPR).

INTRUSION DETECTION SYSTEMS

We provide effective volumetric, perimeter and punctual solutions on accesses in multiple contexts, also using thermal cameras for high protection. We integrate our systems with fog generators and video surveillance, raising the level of security.

ACCESS CONTROL

We implement systems for the management of flows of people, goods, merchandise and vehicles. We manage any type of credential (badge, multi-technology, QR Code, BLE, license plate reading, biometrics, etc.) to protect logistics and multiple types of buildings.

Our solutions

FIRE AND GAS DETECTION SYSTEM

We design, install, integrate and maintain fire detection, gas detection and lithium battery fire detection systems.

We apply UNI 9795 for the construction of fire detection systems and UNI 11224 for maintenance.

FIRE-FIGHTING EQUIPMENT

We fully manage fire protection issues through the supply and maintenance of fire protection devices and extinguishing systems. Our technicians operate in compliance with the UNI 9994-2 standard and 01/09/2021 Decree.

SPECIAL FIRE PROTECTION APPLICATIONS

We install gas detection systems and thermal cameras for fire prevention in landfills, photovoltaic fields and Oil and Gas sites.

We also deal with the fire risk management of lithium batteries.

Research and development projects

Physical Security and Safety Management with Augmented Reality Systems

We developed an advanced system based on augmented reality with The Edge Company, using the Maestro system technology and Lenovo and Nvidia Hardware. It aims to manage the preventive and repressive activities of security personnel and fire-fighting activities.

The operator interacts with the PSIM (Physical Security Information Management) through Smart Glasses in the sites where a PSIM software platform is installed. He has the entire building under control thanks to the interactive graphic map and the cameras.

DIGITAL SKY: the new reality of urban air mobility

The project, in collaboration with The Edge Company, Dottormarc and Parco Scientifico di Verona, funded by the Veneto region (POC-POR FESR 2014- 2020 DGR 1800 funds of 15 December 2021. n 10449971 CUP: B49J22003870009) aims to ensure the safety of the skies, through the creation of a system to detect non-collaborative obstacles by protecting drones for the transport of goods. A prototype has been created combining technologies such as cameras with artificial intelligence algorithms and blockchain, integrated with an environmental monitoring system.

PSIM: 360° security management

The CUBESUITE® PSIM is a special software platform that optimizes the effectiveness of security systems through the centralised, correlated, complete and unified management of the systems installed in one or more buildings.

CUBESUITE® provides a complete overview of all safety devices, indicating their activity status and reporting any **alerts** or **anomalies** also through **interactive graphic maps**.

The system is accessible via web browser from any device connected to the server and enables notifications to be received from the software via email and pop-ups. This way, the user is constantly updated on the ongoing events in real time and can access the event log at any time.

Automatic time-based checks and **scheduled operations** are available.

VIDEO SURVEILLANCE SYSTEMS

The software allows complete management of video surveillance systems, being able to control multiple cameras simultaneously.

INTRUSION DETECTION SYSTEMS

You can monitor the status of your intrusion detection systems, activate and deactivate areas, manage events and alarms in real time.

FIRE DETECTION SYSTEMS

CUBESUITE® integrates fire detection systems, being able to monitor different zones or alarms and having an event log.

ACCESS CONTROL

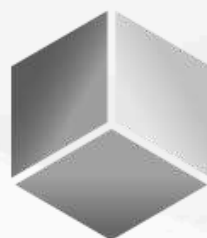

The system ensures complete and integrated control of access control systems, user management and documentation.

ENERGY

With this tool it will be possible to measure and control the energy consumption of the devices, optimizing resources.

BUILDING MANAGEMENT

The system allows you to manage building automation through the home automation system, simplifying life in the building.

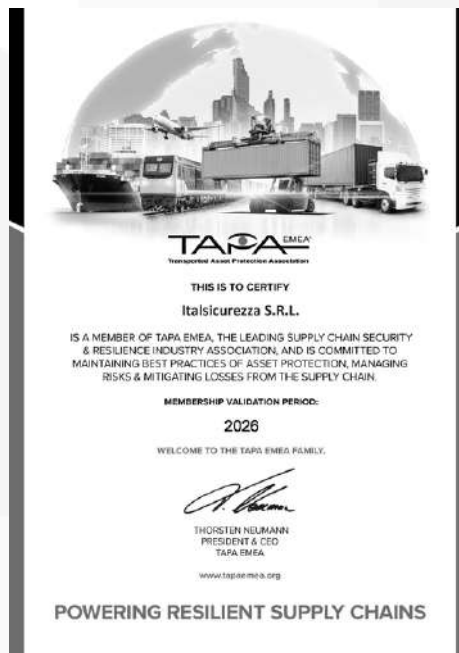

TAPA EMEA: supply chain security

Since 2021, Italsicurezza is a **TAPA EMEA member** (*Transported Asset Protection Association*), which is a world's leading association for supply chain security and resilience.

Thanks to this membership, we are able to support companies in the logistics sector to reach international standards established by TAPA in order to mitigate the risk of loss, theft, tampering, attacks on goods:

- **FSR** (Freight Security Requirements);
- **TSR** (Trucking Security Requirements);
- **PSR** (Parking Security Requirements).

As a member of the TAPA EMEA association, we have access to the **Incident Information Service (IIS) database**, which includes data, statistics and details related to accidents to the supply chain. This allows us to learn how criminals work and develop custom and effective solutions.

Through continuous training and periodic updating courses, we can realize advanced and high performing security systems. They take into account the activities of the criminals and the latest innovations in technology.

Our certifications

Italsicurezza's reliability and efficiency are supported by different certifications we got through the years, certifying the quality of our work and high interventions standards. From the beginning of our activity, Italsicurezza pursued the satisfaction of its customers through products and services provided. We try to keep improving our company performances.

ISO 9001:2015

The **ISO 9001** quality system guides the company in the design, marketing, installation, maintenance and assistance of intrusion detection, access control, video surveillance and fire prevention systems.

ISO 27001:2022

In order to protect our company and customer information, we adopted the **ISO 27001**, implementing a series of rigorous procedures necessary to mitigate risks arising from cyber threats.

SOA OS5 and OS30

We have been certified **SOA OS5** class I° and **SOA OS30** class II° certifications for the supply, assembly, maintenance, and renovation of intrusion detection and internal electrical, telephone, radio, and television systems.

Our collaborations

PARTNERSHIPS

Italsicurezza has established several partnerships with many companies in the Safety and Security sector such as: Notifier, DEA Security, Hanwha Vision, Aritech, KGS, Mileston, BOSCH and many others. In order to always offer the most efficient solutions and the best possible service, we provide only quality technologies, manufactured and assembled in compliance with industry regulations and certifications, and tested by our technical team.

ASSOCIATIONS

Furthermore, we are active in associations as members of Apindustria Confimi Verona, the Italian Association of Security Professionals (A.I.PRO.S.), TAPA EMEA (Transported Asset Protection Association) and the ANIE Federation (ANIE Security and Building Automation sector) with the presence of CEO Stefano Moretto on the board of directors.

REGULATIONS

We participate in several roundtables in the regulatory field and we deal with the dissemination of standards and knowledge in the technical field in order to share useful information for improving the security and safety sector. We are among the authors of the ANIE and ANCI Federation project "Video surveillance of the territory and public environments" to support public bodies in the creation of video surveillance systems that are effective and compliant with regulations.
